

we need to store student names ,
take num of student and names from user
print names

we need to store student age for many tracks
take num of student and tracks from user
enter student ages
and print it
- calc age avg foreach track

create datatype repersent time
time has members (hours ,minutes ,seconds)
-print() =>format => 22H:33M:11S

in main()
-create variable from time and print
